Enterprise Developer Build Tools for Windows Release Notes

These release notes contain information that might not appear in the Help. Read them in their entirety before you install the product.

Product Overview

Enterprise Developer Build Tools for Windows is a separately-installable component of Enterprise Developer that has been designed to be used in environments where you want to work with your COBOL and PL/I projects but you don't want the overheads associated with an IDE.

Installing Enterprise Developer Build Tools for Windows does not install any documentation. Instead, full information on how to use Enterprise Developer Build Tools for Windows is included in the documentation for Enterprise Developer. The documentation that describes how to use Enterprise Developer Build Tools for Windows includes links to the sections of documentation for Enterprise Developer that are relevant to Enterprise Developer Build Tools for Windows.

Installation

Prerequisites for Using Enterprise Developer Build Tools for Windows

This section lists any additional software that you need to be able to use Enterprise Developer Build Tools for Windows.

Apache Ant

Apache Ant version 1.9.x or later is required if you will be using Enterprise Developer Build Tools for Windows to perform build operations using Eclipse project files. You can download Apache Ant from the *Apache Ant project's Binary Distributions page*.

Installing Enterprise Developer Build Tools for Windows

To install Enterprise Developer Build Tools for Windows:

1. Read the following sections of these Release Notes to minimize the chances of encountering issues during or after the installation process:

Restriction: It is not possible to install this version of Enterprise Developer Build Tools for Windows as an upgrade of an existing installation of an earlier release. You must first uninstall the older version.

- *Licensing Considerations*
 - *Prerequisites for using Enterprise Developer Build Tools for Windows*
 - *Restrictions when using Enterprise Developer Build Tools for Windows*
2. Run the `<build_tools_exe>` file and follow the wizard instructions to complete the installation.

The `<build_tools_exe>` file for this product is named:

- `edbt_100.exe`

`edbt_100.exe` can take a number of parameters, enabling you to specify how to install the Build Tools. Examples are as follows:

- Silent Installation

Format: `<build_tools_exe> /quiet`

Summary: Full installation, but the components are installed non-interactively with no user interface, using default options and directories.

- Modified Silent Installation

Format: `<build_tools_exe> /quiet InstallFolder=d:\otherdirectory`

Summary: Full installation, but the components are installed non-interactively with no user interface, and Enterprise Developer Build Tools for Windows is installed to `d:\otherdirectory`.

To see all of the available parameters, execute the following from the command line:

```
<build_tools_exe> /?
```

Microsoft Package Dependencies

Various actions and operations within your COBOL development environment depend on certain files that Microsoft distributes in the following package: the Windows SDK package.

There is a dependency on the Microsoft Windows SDK if you:

- Produce COBOL `.exe` or `.dll` files.
- Call Windows APIs from your COBOL `.exe` or `.dll` files.
- Link a C object file into a COBOL `.exe` or `.dll` file.
- Call Windows APIs from a C object file linked into a COBOL `.exe` or `.dll` file.
- Create MIDL files for OLE RPC.

There is a dependency on the Microsoft Build Tools if you:

- Produce COBOL `.exe` or `.dll` files.
- Manage `.lib` files.
- Create PDB files, for debugging in Visual Studio.
- Convert resource files to object modules.

If you distribute a COBOL product installation to clients that do not have access to the internet, then you need to have downloaded these packages and placed them in an accessible place on the network before clients can run an 'offline installation'. The installer includes options to achieve this: `downloadmstools` enables you to download the required packages to a specific location; and `installmstools` enables an offline client to install the packages from a local network location.

If you do not use any of the features described above, you can use an install parameter (`skipmstools=1`) that will skip the download and installation of these dependencies.

All of these installation options are discussed in more detail in the *Installation Options* topic for your product.

One of the final steps of the installation process configures the downloaded and installed package versions for use in your COBOL environment. You can view these versions using the Windows SDK Configuration Utility - see *Managing the Microsoft Build Tools and Windows SDK Packages*. This utility also enables you to specify alternative versions should you need to depend on a specific package other than the one downloaded, or one stored in a non-default location.

Managing the Microsoft Build Tools and Windows SDK Packages

There are a number of COBOL development features that depend on the Microsoft Build Tools and Windows SDK packages. By default, the product installer downloads and installs these packages to their default locations. The installer then sets your COBOL environment to depend on those downloaded versions.

You can use the Microsoft Build Tools and Windows SDK Packages configuration utility - `cb1ms` - to view which versions are in use, and also configure your COBOL environment if you require something other than the standard usage.

For example, some project types (for example, `.NET` projects) require a different version of the Microsoft Build Tools (the Visual Studio 2019 version) than the one installed (the Visual Studio 2017 version). If you have already installed the correct version for `.NET`, run `cb1ms` after product installation, to update your environment to use the correct package.

There is an option within the product installer to skip the installation of the default packages (`skipmstools=1`); however, this does skip both packages, so make sure that you do already have the

package(s) that you require before setting this - see *Microsoft Package Dependencies* for details on the package(s) you may require.

The Microsoft Build Tools and Windows SDK Configuration Utility

Use the `cb1ms` command line utility to view and set the package versions in effect for your COBOL environment.

Important: If you are updating or clearing package versions, you must run this utility from a command prompt with administrative privileges.

Syntax:

```
cb1ms <option>
```

Parameters:

Note: `<option>` settings are case insensitive.

`<option>` can be one of:

-U

Updates the COBOL environment to use the latest versions of the Microsoft Build Tools and SDK packages that are located in the default folders. Any open IDE instance or command prompt must be restarted before these changes take effect.

-U<ms-pkg>

Updates the COBOL environment to use the latest version of the particular package type that is located in the default folder. Any open IDE instance or command prompt must be restarted before these changes take effect.

-U<ms-pkg>:<version>

Updates the COBOL environment to use a specific version of the particular package type that is located in the default folder. Any open IDE instance or command prompt must be restarted before these changes take effect.

-U<ms-pkg>:<path>

Updates the COBOL environment to use the latest version of the particular package type that is located in the (non-default) folder specified. Any open IDE instance or command prompt must be restarted before these changes take effect.

-U<ms-pkg>:<path>?<version>

Updates the COBOL environment to use a specific version of the particular package type that is located in the (non-default) folder specified. Any open IDE instance or command prompt must be restarted before these changes take effect.

-L

Lists all versions of the Microsoft Build Tools and SDK packages that are located in the default folders.

-L<ms-pkg>

Lists all versions of a particular package type that are located in the default folder.

-L<ms-pkg>:<path>

Lists all versions of a particular package type that are located in the (non-default) folder specified.

-Q

Displays the versions currently in use by the COBOL environment.

-Q<ms-pkg>

Displays the version of the selected package type that is currently in use by the COBOL environment.

-R

Clears all version information. (Only use this option when instructed to by OpenText Support for Micro Focus Products.)

-H

Displays the available command line options.

Legend:

<ms-pkg> *<ms-pkg>* can be one of **S** or **SDK** for the Microsoft SDK, or **B** or **BT** for the Microsoft Build Tools.

<path> *<path>* is the path in which to locate packages that are not installed to the default location for their package type.

<version> *<version>* is the package version with which to update when the latest version is not the one required. When specifying *version*, it must be in the form:

- *n.n.n.n* for a Windows SDK
- *n.n.n* for Build Tools
- *n* for list ID - the list ID is displayed using `cb1ms -L`.

The following example updates the COBOL environment to use version 10.0.17134.0 of the Windows 10 SDK, installed in `C:\WinSDK\10`.

```
cb1ms -USDK:C:\WinSDK\10\10.0.17134.0
```

Restrictions when Using Enterprise Developer Build Tools for Windows

The following list describes elements of functionality of Enterprise Developer Build Tools for Windows that you should be aware of before installing it:

- You cannot install Enterprise Developer Build Tools for Windows on the same machine as Enterprise Developer, Visual COBOL, or Visual COBOL Build Tools for Windows.
- Installing Enterprise Developer Build Tools for Windows does not install any documentation. Instead, full information on how to use Enterprise Developer Build Tools for Windows is included in the documentation for Enterprise Developer. The documentation that describes how to use Enterprise Developer Build Tools for Windows includes links to the sections of documentation for Enterprise Developer that are relevant to Enterprise Developer Build Tools for Windows.
- To debug a COBOL application that is running in Enterprise Developer Build Tools for Windows you need to use remote debugging.

Information on using remote debugging with Enterprise Developer Build Tools for Windows is available in your Enterprise Developer documentation. See *Remote Debugging of Native COBOL Applications* if you are using Enterprise Developer for Visual Studio or *Debugging using a remote machine* if you are using Enterprise Developer for Eclipse.

- Remote debugging is not available for .NET COBOL applications, so you cannot use Enterprise Developer Build Tools for Windows to debug .NET COBOL applications (although you can use Enterprise Developer Build Tools for Windows to build and run them).

Licensing Considerations

Enterprise Developer Build Tools for Windows requires the same license as the Enterprise Developer IDE products (i.e. Enterprise Developer for Visual Studio or Enterprise Developer for Eclipse) so you need to ensure that you have enough licenses to cover your use of both Enterprise Developer Build Tools for Windows and any other Enterprise Developer development product on Windows.

For example, if you have purchased six development licenses and install one instance of Enterprise Developer Build Tools for Windows you can install an IDE-based Enterprise Developer product or Enterprise Developer Build Tools for Windows on a maximum of five other machines.

Updates and OpenText Support for Micro Focus Products

Our Web site provides up-to-date information of contact numbers and addresses.

Further Information and OpenText Support for Micro Focus Products

Additional technical information or advice is available from several sources.

The product support pages contain a considerable amount of additional information, such as:

- Product Updates on [Software Licenses and Downloads](#), where you can download fixes and documentation updates.
 1. Log into the Software Licenses and Downloads (SLD) site at <https://sld.microfocus.com/mysoftware/download/downloadCenter>.
 2. Select your account and click **Entitlements**.
 3. Search for the product by using any of the available search parameters.
 4. Click **Show all entitlements**.
 5. Click **Get Software** in the Action column for the product you want to download or update.

In the **File Type** column, you see entries for "Software" for any GA products, and "Patch" for any patch updates.
 6. Click **Download** on the relevant row.
- The *Examples and Utilities* section of the OpenText Support for Micro Focus Products Web site, including demos and additional product documentation. Go to <https://supportline.microfocus.com/examplesandutilities/index.aspx>.
- The *Support Resources* section of the OpenText Support for Micro Focus Products Web site, that includes troubleshooting guides and information about how to raise an incident. Go to <https://supportline.microfocus.com/supportresources.aspx>

To connect, enter <https://www.microfocus.com/en-us/home/> in your browser to go to the Micro Focus home page, then click **Support & Services > Support**. Type or select the product you require from the product selection dropdown, and then click **Support Portal**.

Note: Some information may be available only to customers who have maintenance agreements.

If you obtained this product directly from Micro Focus, contact us as described on the Micro Focus Web site for Micro Focus products, <https://www.microfocus.com/support-and-services/contact-support/>. If you obtained the product from another source, such as an authorized distributor, contact them for help first. If they are unable to help, contact us.

Also, visit:

- The Micro Focus Community Web site, where you can browse the Knowledge Base, read articles and blogs, find demonstration programs and examples, and discuss this product with other users and Micro Focus specialists. See <https://community.microfocus.com>.
- The Micro Focus YouTube channel for videos related to your Micro Focus product. See [OpenText YouTube Channel for Micro Focus Products](#).
- Micro Focus webinars: <https://www.microfocus.com/en-us/resource-center/webinar>.

Information We Need

If your purpose in contacting Micro Focus is to raise a support issue with OpenText Support for Micro Focus Products, you should collect some basic information before you contact us, and be ready to share it when you do.

Creating Debug Files

If you encounter an error when compiling a program that requires you to contact OpenText Support for Micro Focus Products, your support representative might request that you provide additional debug files (as well as source and data files) to help us determine the cause of the problem. If so, they will advise you how to create them.
