Software Version 12.11.0

Release Notes

**MICRO FOCUS®**

## Legal notices

## Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit https://www.microfocus.com/support-and-services/documentation/.

## Support

Visit the MySupport portal to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- View information about all services that Support offers
- Submit and track service requests
- Contact customer support
- Search for knowledge documents of interest
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in.

# **Contents**

# New in this Release

The following new features were released in NiFi Ingest version 12.11.0.

- You can configure a QueryIDOL processor to copy FlowFile attributes from a FlowFile that initiates a query into all of the results.

- When viewing a FlowFile in the `application/x.idol.doc` viewer, you can download the file from a `ContentFile` or `ContentFileName` part.

- NiFi Ingest includes a new processor named `DeduplicateDocuments`. You can use this processor to route duplicate documents to a "duplicate" relationship. Duplicates are identified based on a database of hashes.

- The processors included in the IDOL NiFi Ingest and IDOL NiFi Connector Router packages have been updated so that the advanced configuration interfaces are compatible with Apache NiFi 1.15.0 to 1.15.3.

# Resolved Issues

The following issues were resolved in NiFi Ingest version 12.11.0.

- An interruption of service could occur when the KeyViewFilterDocument processor attempted to process certain files and `streaming_method=pipe` was set in the KeyView configuration file `formats.ini`.

- An issue with the version of KeyView packaged with IDOL NiFi Ingest could cause an interruption of service when some files were processed by the KeyViewExtractFiles processor.

- An interruption of service could occur if documents were processed by an Eduction processor.

# Documentation

The following documentation was updated for NiFi Ingest version 12.11.0.

- *NiFi Ingest Online Help*
