The only warranties for products and services of Micro Focus and its affiliates and licensors (“Micro Focus”) are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. Micro Focus shall not be liable for technical or editorial errors or omissions contained herein. The information contained herein is subject to change without notice.

## Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit <https://www.microfocus.com/support-and-services/documentation/>.

## Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

## New in this Release

The following new features were released in Distributed Index Handler version 12.6.0.

- You can now use the `EngineManagement` action to modify the host and port of a DIH child server, with `EngineAction` set to **Edit**.
- In Consistent Hashing distribution mode, when document replicas are configured, you can now rebuild a lost child server by sending the `DREREDISTRIBUTE` index action with the new `RebuildEngine` parameter set to the engine ID of the child server that you want to rebuild.

If you have configured more than one replica, you can set `RebuildEngine` to a comma-separated list of engine IDs.

## Resolved Issues

There were no resolved issues in Distributed Index Handler version 12.6.0.

# Notes

These notes provide extra information about installing and using Distributed Index Handler.

- ACI Encryption has been deprecated. Instead of using ACI encryption, Micro Focus recommends configuring Secure Socket Layer (SSL) connections between ACI servers and applications.

You can use GSS authorization without using ACI encryption by configuring the `GSSServiceName` and `RequireGSSAuth` parameters.

ACI encryption is still available for existing implementations, but it might be incompatible with new functionality. The functionality might be deleted in future.

# Documentation

The following documentation was updated for Distributed Index Handler version 12.6.0.

- *Distributed Index Handler Reference*
- *Distributed Index Handler Administration Guide*
