OpenText Open Enterprise Server 24.1 Release Notes

March 2024

OpenText Open Enterprise Server 24.1 is an update for OES 23.4 that includes enhancements, improves usability, and defect fixes.

If you have suggestions for documentation improvements, click **comment on this topic** at the bottom of the specific page in the HTML version of the documentation posted at the OES Documentation page.

What's New

What's New in OES 24.1.1

Unified Management Console (UMC)

Managing Cluster

- Create resource.
- Configure resource.
- Cluster reports.
- Cluster event logs.

For more information, see Managing Clusters in the OES 23.4: Unified Management Console.

Managing NCP Connections

Open Files: Displays a list of open files. An administrator can then select the files and close them remotely.

For more information, see Managing NCP Connections (OES 24.1) in the OES 23.4: Unified Management Console.

What's New in OES 24.1

- "Unified Management Console (UMC)" on page 2
- "Cloud Integrated Storage" on page 2
- "DFS Management Tool Enhancements" on page 3

Unified Management Console (UMC)

Managing Cluster

- Configure and repair clusters.
- Two views available on Cluster dashboard page: graphical representation and full-page view of nodes and resources.
- Graphical representation of node availability and quorum compliance.
- Add and remove nodes from favorites, and restart nodes.
- Node dashboard featuring graphical representations of server statistics for the nodes.
- Add and remove resources from favorites.

NOTE: The above features are not available in OES 23.4.

For more information, see Managing Clusters in the OES 23.4: Unified Management Console.

Managing NCP Connections

Beginning with OES 24.1, Unified Management Console supports the management of NCP connections and actions that can be performed on them.

For more information, see Managing NCP Connections (OES 24.1) in the OES 23.4: Unified Management Console.

Cloud Integrated Storage

Azure Support

Beginning with OES 24.1, Azure is supported as the new account type in addition to AWS S3 object store. For more information, see Accounts in the OES 23.4: CIS Administration Guide.

New Policies

Added the following policy to migrate or recall all the files and folders starting from the given directory path.

- Directory path is equal to
- Directory path is not equal to

For more information, see Policies in the OES 23.4: CIS Administration Guide.

DFS Management Tool Enhancements

Beginning with OES 24.1 release, the DFS Management tool will support VLDB operations, including repair, start, stop, activate, deactivate, and view information about the VLDB services.

For more information, see DFSTOOL in OES 23.4: Distributed File Services Administration Guide for Linux.

Updating OES 24.1.1 Server

For updating to OES 24.1.1, you must be on the following versions:

Table 1 *Supported Path for Upgrading to OES 24.1.1*

Source Version	Destination	Upgrade Methods Supported	Additional Information
OES 24.1	OES 24.1.1	NCC Subscription Management Tool (SMT) SUSE Manager	Before update, you must register to NCC or SMT. **NOTE:** Update support with ZENworks will be available soon.
OES 23.4 with the latest patch	OES 24.1.1	NCC Subscription Management Tool (SMT) SUSE Manager	Before update, you must register to NCC or SMT. **NOTE:** Update support with ZENworks will be available soon.
OES 2023 with the latest patch	OES 24.1.1	Physical Media (OES 23.4) AutoYaST Channel Upgrade SUSE Manager	Before update, you must register to NCC or SMT. **NOTE:** Update support with ZENworks will be available soon.
OES 2018 SP3 (64-bit) with the latest patch	OES 24.1.1	Physical Media (OES 23.4) AutoYaST	During upgrade, you must register to NCC or SMT.

For more information, see Upgrading OES and Update Options in OES 23.4: Installation Guide.

NOTE

- The OES24.1.1.tar.xz compressed file in SLD contains RPMs from the OES 24.1.1 update for reference only.
- Upgrade support with ZENworks will be available soon.

Service Issues

This section provides service issues pertaining to OES 24.1 or OES 24.1.1 release only.

Unified Management Console

Intermittent Missing Data in Node Listing Table

Randomly, connections data is missing from the node listings when the cluster dashboard is loaded or the node listing table is refreshed. To resolve the issue, refresh the page again.

New Features in UMC Available with Latest OES Server

To utilize the newly added features of UMC, ensure that you are using the latest OES server. If you are managing OES 2023, OES 23.4, and later servers with UMC, the requests might fail to process.

For example, in the case of OES Cluster Services (NCS), the cluster master must be on the latest OES server to leverage all the new features in UMC.

OES Installation, Upgrade and Update

The value of `"SERVICE_CONFIGURED="` in `/etc/sysconfig/novell/edir` is changed from `"yes"` to `"no"` by the `"yast2 channel-upgrade-oes"` command during the Channel Upgrade from OES 2023 to OES 24.1 using Zypper. This was resulting in an upgrade issue, which is now fixed in Update 5.1 OES 2023 Hotfix.

To avoid this issue, ensure that OES 2023 is updated with the latest patches from the channel before upgrading to OES 24.1.

For issues related to OES 23.4, see Service Issues in OES 23.4: Release Notes.
